delivery
JHB available**

Only R15,999 excluding vat
Includes door to door delivery within 72
hours

Makes up to 70 litres of water per day from the air

AIR  **WATER™**

Air Water™

Overview

In South Africa, one company is tapping into an alternative source for drinking water - the air.

The award winning company, rated as the most innovative company in the Western Cape, South Africa in 2020, is the leader in atmospheric water generation in Africa.

“The company was founded in Africa, by Africans for Africans. All too often machinery and technology is designed for regions in the world that operate in ideal situations regarding infra structure, accessibility etc. Africa has her own needs and we focus on this continent. Back up and spares are available 24/7. This is what makes us number 1” says Ray de Vries, founder of the 17 year old company.

Air Water™ uses pioneering technology for use in homes, offices, schools, clinics, community centres, lodges and anywhere else people need pure drinking water on tap.

It enables clean, drinkable water to be harvested from the humidity in the air.

The Air Water™ machines operate according to the humidity in the air, drawing it in and cooling it to allow condensation to form in a collecting tank. The collected water is then filtered to remove any further impurities there might be. The company has developed an innovative way of increasing humidity for higher production using a method that makes soft water from hard water.

Since the water is drawn from the air, rather than the ground, it is already much cleaner and excludes contaminants more commonly found in terrestrial sources. It also is deliciously soft.

The result is 100% pure and clean water which is alkaline and the softest water one can get. Air Water™ designs solutions depending on the application needed – from a household gravity drop filter producing up to 70 litres a day to THE RAINMAKER which is a stand-alone hybrid solar solution housed in a shipping container and can produce up to 1500 litres a day.

Home , Office, Community...

Control Panel

The Air Water AW70™ + Filter is a breakthrough in simplicity, ease-of-use and cost. Until now, making water from the air has been a costly exercise

Features include:

- Only 27kg and mobile
- Only 71cm x 46cm x 46cm
- Makes up to 3litres per hour (72 litres per day)
- Draws only 640W (ideal for solar)
- Run the machine until you have enough water, switch off and store.

Power

- Voltage 220v / 50Hz
- Rated Power 700W
- Operating Power 640w
- Max. Current 3.8A
- Max. Power 820W
- Fuse size F type, 2A, 250v

Maintenance

- Change filters only once a year +-R750
- Fully Stocked spares back up
- Maintenance consultants online
- 12 month Warranty
- Refrigerant R410a/420g

Typical Water Analysis

Magnesium	0.2
Sodium	0.2
Potassium	0
Chloride	5
Sulphate	0.3

*Results can vary depending on what filtration is used.

Nitrate	0
Fluoride	0
Iron	0
pH	7.6
TDS	<18

Features Include

- Makes water from the air quickly (up to 3 litres per hour)
- AW70 is mobile so you can roll it away when the filter, jug or other any other store is full.
- Machine can gravity feed or pump the water into the filter / Store
- Ionise the air in your home
- Easy cleaning once a week
- Mineralising filter
- Change filter only once a year
- Little maintenance required
